reimagining engineering education for the ai era

The unified practical learning workspace connecting academic theory, custom AI video lessons, in-browser coding, and 24/7 WhatsApp mentoring into one tactile notebook.

Live Interactive Prototype

WhatsApp Bot Active

Meet Owlbert — The Official EziLearning AI Mentor

Daily micro-challenges · Pocket doubt-clearing on WhatsApp

the fragmented learning crisis in higher education

Current Learning Management Systems (Canvas, Blackboard, Moodle) are passive lecture archives. Practical coding, projects, competitions, and mentoring are shattered across separate tools.

1. Passive Theory Silos

Traditional college LMS platforms only deliver static PDF notes and multiple-choice quizzes. Zero telemetry on whether a student can actually write clean, modular software.

2. Toolchain Fatigue

Students juggle 6+ disconnected subscriptions: Coursera for video, LeetCode for algorithms, GitHub for repos, WhatsApp for doubts, and Excel sheets for placement cells.

3. The Readiness Deficit

Institutions lack real-time visibility into actual candidate skills. Over 80% of engineering graduates lack day-one production coding and systems readiness.

84%
Graduates Unready for Day-1 Roles

6+ Tools
Juggled Simultaneously by Students

32%
Course Dropout Due to Generic Videos

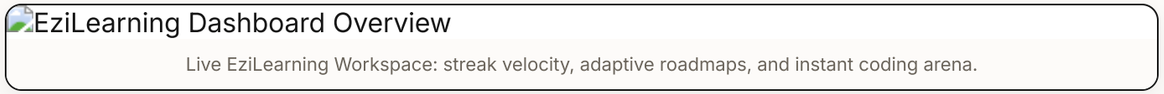

meet ezilearning: one tactile notebook workspace

We unify every stage of the student engineer journey — from first-year fundamentals to recruiter-verified portfolios — into a single, game-inspired tactile interface.

1. Adaptive AI Roadmaps:
Dynamic Directed Acyclic Graph (DAG) that personalizes pacing and prerequisites based on student role targets.

2. AI-Synthesized Video Lessons:
Personalized 90-second Manim/FFmpeg animations generated on-demand to bridge specific code comprehension gaps.

3. 24/7 WhatsApp AI Mentor:
Owlbert the Owl brings 8:30 AM daily 60-second micro-quizzes and instant doubt resolution directly to students' phones.

Live EziLearning Workspace: streak velocity, adaptive roadmaps, and instant coding arena.

customized video lessons tailored to student gaps

Instead of watching static 45-minute generic YouTube tutorials, students receive an AI-generated 90-second visual explanation targeting their exact algorithmic misconception.

1. Telemetry Bottleneck Detection
Identifies off-by-one pointer errors, recursion stack overflow, or memory overhead in coding exercises.

2. Automated Storyboarding & Voiceover
Compiles targeted narration script and programmatic graph scene descriptions in 1.4 seconds.

3. 1080p Local High-Fidelity Rendering
Renders graph nodes, pointer animations, and step-by-step proofs synchronized with voice explanations.

✓ Proven 3.2x higher concept retention vs. passive video lectures

Varin Video Player: AI-generated Dijkstra algorithm relaxation animation (Frame captured at 1:58).

pocket mentoring on whatsapp with owlbert 🦉

Students spend hours away from computers. EziLearning builds daily learning habits by bringing quizzes and doubt-clearing directly to WhatsApp — with zero friction or app install required.

🌞 Daily 8:30 AM 60-Second Micro-Challenges

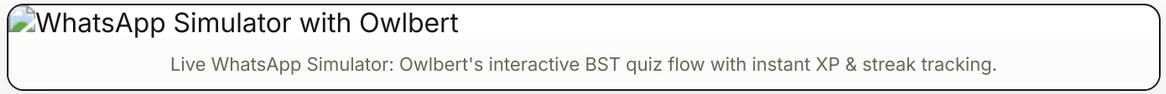

Owlbert sends a bite-sized algorithmic question to students' WhatsApp every morning. Quick taps (A, B, C, D) award XP, keep streaks ablaze, and compound daily retention.

💬 Instant Photo & Voice Doubt Clearing

Stuck during a lecture or late at night? Students snap a picture of code or record a voice query. Owlbert explains edge cases and complexity Socratically right inside chat.

🔗 QR-Code Pairing to Institutional Profile

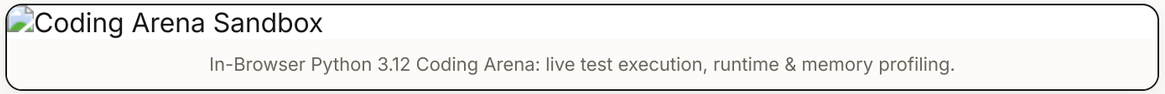

One-click WhatsApp linking securely synchronizes quiz answers, streak milestones, and telemetry back to the student's campus LMS passport.

Live WhatsApp Simulator: Owlbert's interactive BST quiz flow with instant XP & streak tracking.

zero-friction coding & recruiter-verified proof

We move students from memorizing algorithm solutions to designing production-ready systems with instantaneous runtime benchmarks and verified live portfolio pages.

In-Browser Python 3.12 Coding Arena: live test execution, runtime & memory profiling.

Zero-Install Cloud Sandbox:
Executes Python, C++, Java, and TypeScript directly in the browser with automated test runners and memory profiling.

Architectural Project Milestones:
Students build full-stack systems with step-by-step code checkpoints, pull request evaluations, and schema migrations.

Verified Recruiter Portfolio URLs:
Generates cryptographic proof of code authorship, solving time, and platform contest ratings on one public link.

campus sprint leagues & holistic readiness scoring

Replacing arbitrary 0–100% course completion bars with an industry-calibrated Readiness Index and weekly inter-college coding leagues.

The 5-Factor Readiness Index (0–100%):

1. Algorithmic Mastery	30% Weight
2. Project Architecture & Commits	25% Weight
3. WhatsApp Streak Consistency	20% Weight
4. AI Mock Interview Technical Communication	15% Weight
5. Live Job Market Skill Alignment	10% Weight

Roadmap DAG: dynamic skill nodes, prerequisite unblocking, and verified milestone badging.

a $34b global engineering workforce opportunity

Engineering institutions face unprecedented accreditation pressure (NAAC, NBA, ABET) while tech employers struggle with high candidate interview noise.

$34.2B

Total Addressable Market

Global STEM higher-ed software, LMS upgrades, and workforce recruitment infrastructure.

4,200+

Target Engineering Colleges

Accredited institutions seeking automated coding labs and verified placement telemetry.

1.5M+

Annual Computer Science Grads

Undergraduates requiring daily algorithmic practice, project guidance, and placement support.

Why Now? The Generative AI Turning Point

Until 2026, creating personalized video lessons and 24/7 dedicated human mentoring cost thousands of dollars per student. With local automated render pipelines (Manim/FFmpeg) and conversational AI on WhatsApp, EziLearning delivers bespoke visual tutoring at **near-zero marginal cost** per student.

high-margin b2b2c model with compounding retention

We monetize institutional campus contracts upfront while monetizing premium student tooling and verified enterprise recruitment pipelines.

tier 1: institutional b2b

Campus Enterprise SaaS

$14–$28 /student/year

Institutional deployment with department analytics, automated coding lab tests, and accreditation compliance dashboards.

tier 2: student pro b2c

Student Pro Pass

$9 /month

Unlimited on-demand AI video synthesis, prioritized 1-on-1 AI mock interviews, and advanced FAANG competition tracks.

tier 3: recruiter marketplace

Recruiter Matchmaking

15% placement fee

Employers skip first-round resume screening and interview pre-verified Grandmasters with cryptographic proof of skill.

The EziLearning Flywheel

Campus Adopts ➔ WhatsApp Streaks Engage Students ➔ Placement Success Doubles ➔ College Renews & Expands

120%+ Net Revenue Retention

join us in building real engineering momentum

We have built and validated the live interactive prototype, video engine, and WhatsApp bot. Now expanding to 50 flagship engineering institutions.

PHASE 1 (ACHIEVED)

Core Platform Live

- Tactile Superr UI & DAG Roadmaps
- Varin AI Video Player (1:58 frame)
- WhatsApp AI Mentor Owlbert simulator
- In-browser Python 3.12 coding arena

PHASE 2 (H1 2027)

50 Campus Pilot Rollout

- Onboarding 50 engineering colleges
- 100,000 active daily student streaks
- Inter-college algorithmic leagues
- Campus placement cell admin portal

PHASE 3 (2027+)

Global Talent Protocol

- Direct recruiter talent matchmaking
- Global Grandmaster badge verification
- Mobile apps (iOS & Android) live
- Enterprise hiring integrations

ready to build real engineering momentum?

EziLearning is the unified ecosystem where engineering students learn, build, compete, and get hired.
